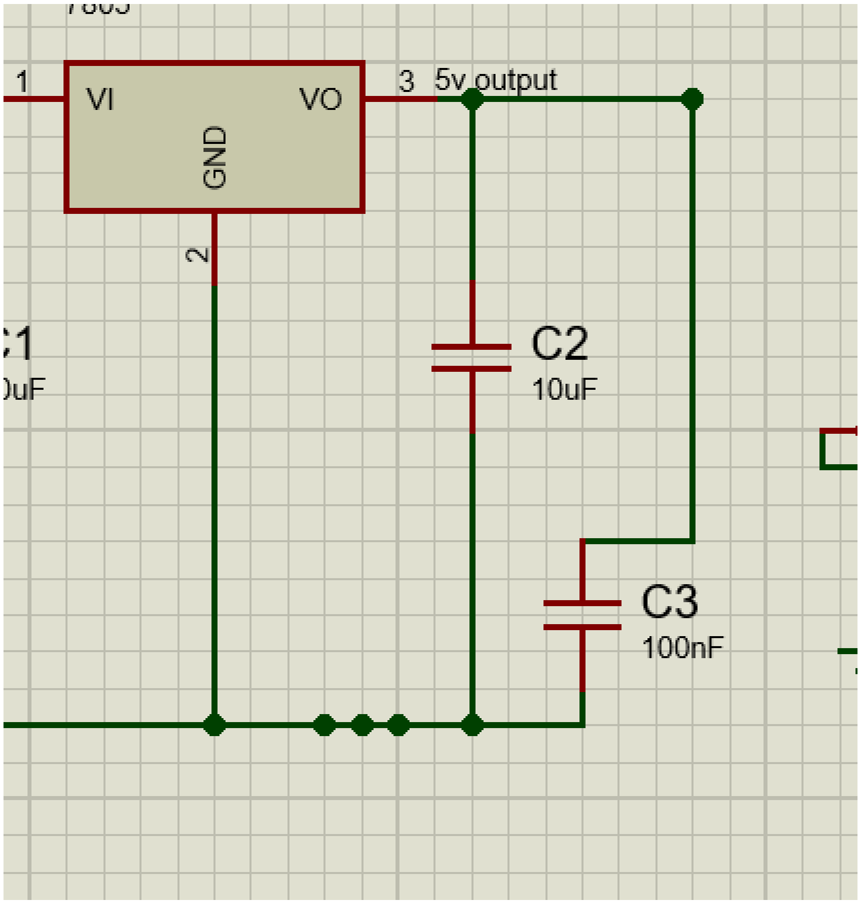
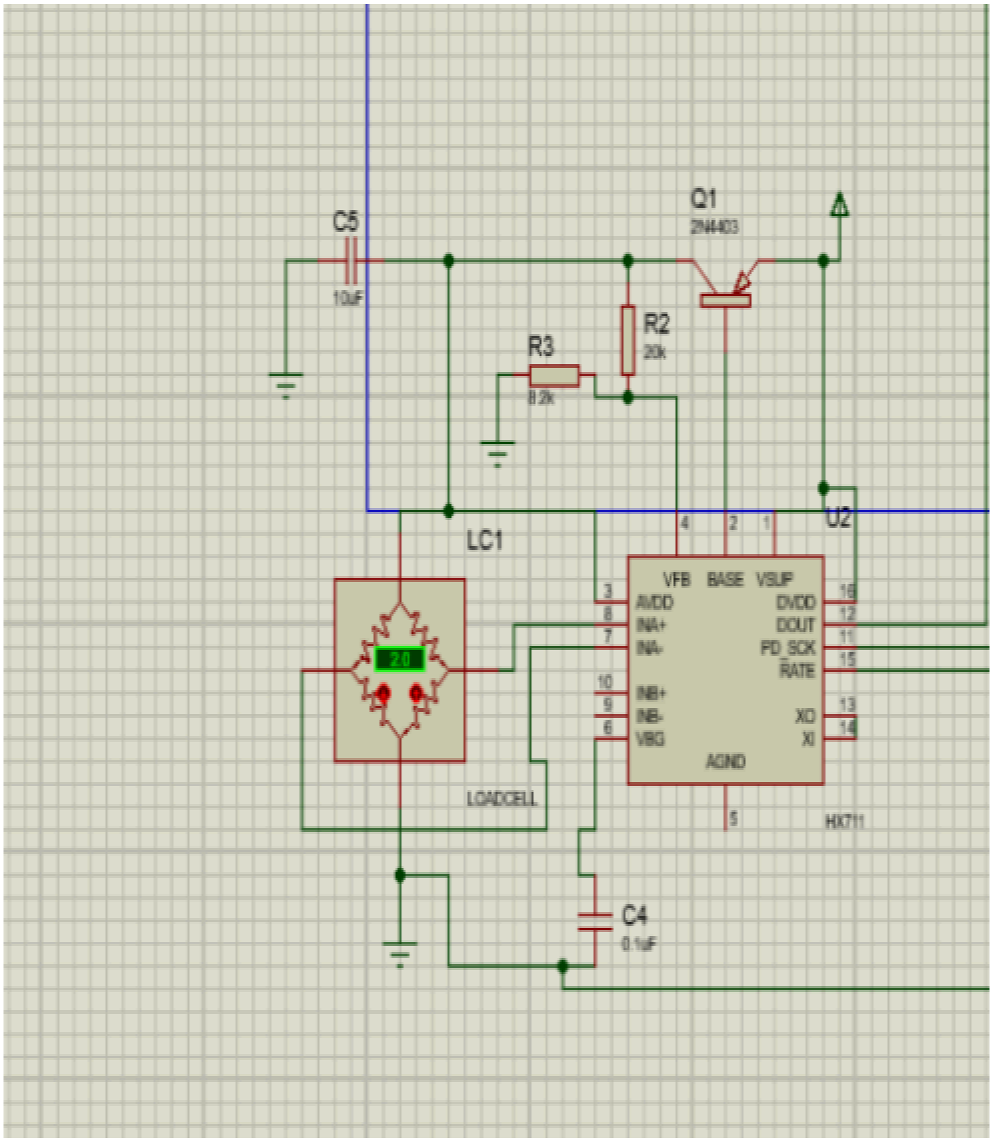
Take you power from pin output node that 5v and the ground from below

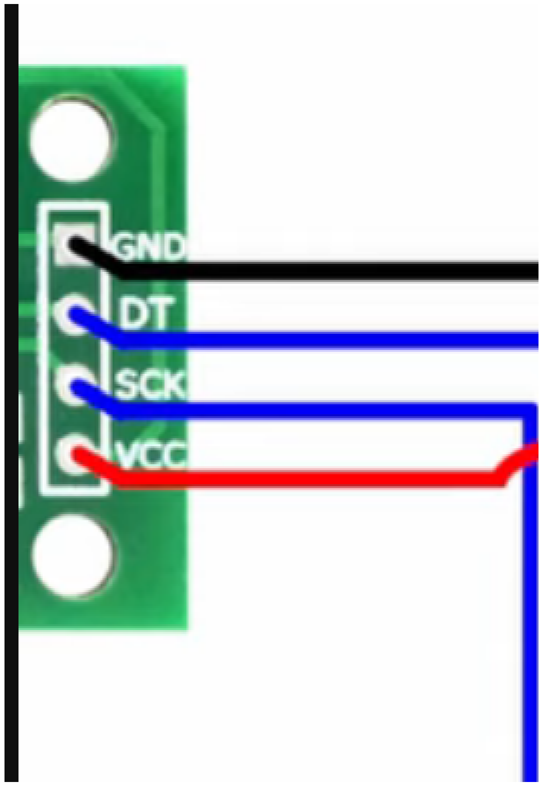


Remember to get the vcc and ground for microcontroller as they are not in the picture

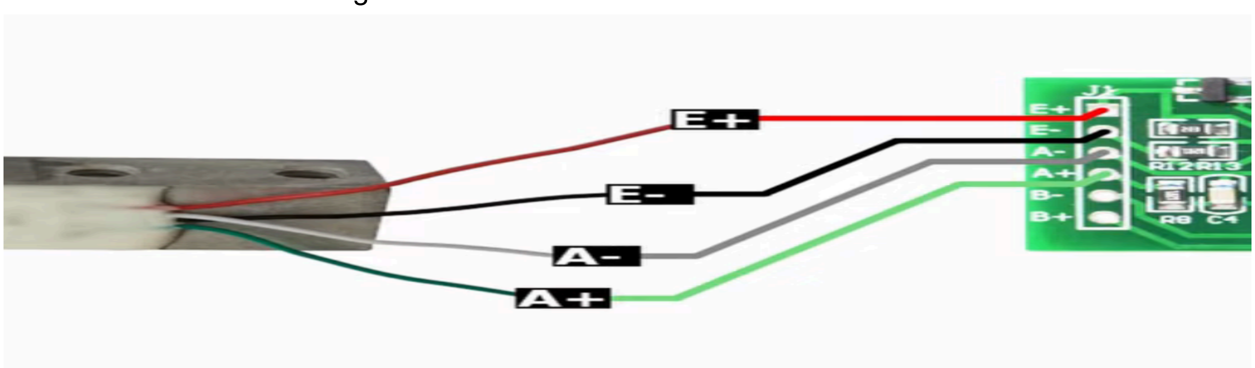


i gnore that part]

only the dout pd_sck to microcontroler showing place and vcc and gnd from the source circuit
PA0 → INPUT (read DOUT from HX711) PA1 → OUTPUT (send SCK clock to HX711)



https://www.youtube.com/watch?v=sxzoAGf1kOo
This reference but vcc and ground not from microcontroller



Here are all the datasheet links for your project:
